Consent-Controlled Permissions

The following permissions require successful authorization checks before access is granted:

Permission ID Consent Required

PERM-007 Yes

PERM-009 Yes

PERM-013 Request initiates consent workflow

PERM-018 No (Emergency Policy Override)

Emergency Override Rule

Emergency access does not require prior patient consent but must satisfy:

- Authorized Emergency Healthcare Provider role
- Valid emergency access request
- Policy-based authorization
- Time-bound access duration
- Audit logging
- Post-emergency review

RBAC Design Principles

1. Patient is the owner of healthcare data.
2. Doctors never receive implicit access.
3. Consent governs normal healthcare record sharing.
4. Emergency access follows controlled policy overrides.
5. Security Auditors can investigate but cannot modify healthcare records.
6. Administrators govern platform operations but cannot access patient healthcare records unless separately authorized.
7. Least-Privilege Access is enforced across all roles.
